Abstract

This document is meant as a template for the abstracts submitted to 4th Nonlinear Processes in Oceanic and Atmospheric Flows. **We ask authors please not to exceed one page.** If you find appropriate, you can include figures in the abstract. The template shows an example on how to include one figure (see Figure 1), and also references.

This abstract template has been prepared using the standard Latex. To put our work in context, it is useful to include references [1]. We hope people find this template useful and, most importantly, we very much look forward to seeing you in Barcelona next January!

Figure 1: Nice figure!

Acknowledgement
